Household Chemical-Free and Natural Sanitizer Manufacturer To Exhibit at 2007 Annual Meeting of the American Academy of Allergy, Asthma & Immunology

Chemical free super cleaner is 50% stronger than bleach

The world's most effective sanitizer and deodorizer is 50% stronger and works 3,000 times faster than bleach yet is completely natural and created using ordinary tap water. Manufacturers of the countertop appliance have developed a process that super oxygenates tap water creating a powerful super cleaner that kills germs and pesticides without chemicals.

Furthermore, fifteen minutes after being "supercharged" the water compound breaks down and returns to the natural state of water, however, when active is completely harmless for humans, plants, pets and the environment.

"It makes sense for us to be at AAAAI's Annual Meeting" says Steve Hengsperger, President of Tersano, manufacturers of the Lotus sanitizing system. "We hear regularly from our customers who are allergy sufferers and asthmatics that our product is incredibly helpful in managing their conditions.

It's important for us to be at the heart of science and medicine in these fields to network and introduce our product to key players," he added.

Super-oxinated water disinfects all kinds of surfaces on contact – cutting boards, kitchen counters, stovetops, knives, sinks, toilets, garbage cans and diaper pails. It even tackles tough jobs like mold and mildew growing on walls. It is also excellent for neutralizing pet odours in carpets, dog beds, upholstery or car interiors.

The Tersano Lotus is also ideal for washing food. The system is 99.9% effective at killing microorganisms on seafood, meat, poultry and produce. At the same time, it neutralizes pesticide residues on fruits and vegetables. The FDA and the USDA accept the system as a safe and effective way to decontaminate all kinds of foods.

The Tersano Lotus is a small countertop device that incorporates a miniaturized version of the multi-million dollar ozone-saturation technology used in food processing plants worldwide. Each kit contains a main unit/base (11" diameter) and two specially-designed containers; a 16 oz. trigger spray bottle with an adjustable nozzle and a clear plastic bowl with a lid/strainer.

The spray bottle gets filled with ordinary tap water and is placed on the base unit. After two minutes the water is sanitized and a fifteen-minute countdown timer begins allowing chemical-free sanitization until a refill or recharge is required. The bowl also fits onto the base unit. After rinsing dirt off the food, it is placed in the bowl and tap water is added. In just a few minutes the food is virtually free of bacteria and pesticide residue.

The product was voted Time Magazine's Best Invention of 2006

About Tersano Inc: *Tersano Inc. is a Canadian developer of cutting-edge household sanitizing systems aimed at eliminating the need for toxic cleaning chemicals in the home. President Steve Hengesperger believes the time has come to improve our quality of life by enabling consumers to naturally protect themselves and their families from harmful toxins, germs and bacteria. Incorporated in 2002, Tersano is committed to changing the way we think about cleaning chemicals*
